

# FAIBRICS

**FAIBRICS** is a startup focused on quality assurance within the textile industry. Together we are working on the development of a quality control system for textile seams based on artificial intelligence. With FAIBRICS we want to contribute significantly to a more sustainable quality assurance.

We are looking for an intern (f | m | d) to support our team in the field of computer science, electrical engineering or mechanical engineering for **10 - 40 hours / week**.

## Your main responsibilities

- You supervise the setup of a system for networking our cameras and server systems
- Furthermore, you will support the further development of our startup in all areas

## Your skills

- Advanced or completed studies ideally in the field of computer science, mechanical engineering, (industrial) engineering
- Programming experience for one of the common programming languages (e.g. Python, Java)
- Communication and organizational skills in German and English

## Our offers for you

- You work remotely with flexible working hours in a young team
- You bring in your own ideas & suggestions
- You get a pole position for possible future leadership positions

Are you interested? Then we look forward to hearing from you at [contact@faibrics.com](mailto:contact@faibrics.com).
