

## How To Add Codecs: Step By Step

1. **Download ffmpeg** - Roon will need access to the required codecs via the ``/Data/Codecs/`` directory. You'll need to download these codecs on another computer before you put them on ROCK.

- For example, grab <https://johnvansickle.com/ffmpeg/builds/ffmpeg-git-amd64-static.tar.xz> and uncompress it. Remember, no additional files from that package are required, only ffmpeg. You will need to uncompress the file twice.
- If you are using Windows and do not have the ability to uncompress .tar files, we recommend downloading the open-source program [7-Zip](#)
